Plasterboard Sustainability Partnership (PSP)

The Plasterboard Sustainability Partnership (PSP), which is made up of the broad range of stakeholders involved in the production, installation and disposal of plasterboard as well as the relevant government departments and regulatory agencies, was established in 2009 as an output of a DEFRA programme to develop a Plasterboard Roadmap identifying the environmental impacts of plasterboard throughout its lifecycle.

The intent of the PSP is to enable greater awareness and understanding amongst all stakeholders of existing knowledge about the role plasterboard plays in construction and of the sustainability issues throughout the supply chain, and to use this knowledge to develop practical and coordinated strategies for sustainability. This includes economic and social as well as environmental impacts.

For more details on the PSP visit <http://www.plasterboardpartnership.org>
