

Digital Construction Working Group

Agenda

Opening – Iain McIlwee

Objectives – Diane Tocco

Keynote Presentation 1 – Legislation: What is the Golden Thread? (20 mins + Q&A)
George Stephenson, Managing Director at ActivePlan Consulting Ltd

Keynote Presentation 2 – FIS Guide: Digital Information Plans and Overview (20 mins + Q&A)
Iain McIlwee, CEO Finishes and Interiors Sector

Open Discussion on Key trends: Digitalisation and challenges in the finishes and interiors sector.
How digitalisation is supporting Compliance, Productivity, Opportunity and Priorities, the opportunities and challenges

Close Meeting – Diane Tocco

Digital Construction Working Group – December 2023

1

Diane Butterworth LTD –

Specialists In Digital Content Supporting
The Workplace & Construction Industry

BIM Objects

Space Planning

BIM Coordination

Digital Construction Working Group - December 2023

2

Diane Butterworth LTD –

An example list of our services, software and clients.

Services

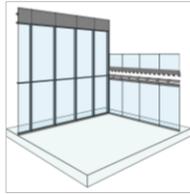

Revit Families
Commercial Interiors
3D Visualisation
BIM Coordination
Clash Detection

Software

Revit

Navisworks
Enscape Rendering
BIM Software (CDE, Management)

Manufacturers

Furniture
Partitioning
Ceiling
Flooring
Joinery ... etc

Digital Construction Working Group - December 2023

3

Diane Butterworth LTD –

Who is Diane!

I am Diane Tocco, previously Diane Butterworth!

BA Hons in Product Design 2011
Office Design Consultant 2011-2015
Founded DBLTD in 2016
Businesswomen of the Year SME MK & Bucks 2021
Chartered Institute of Architectural Technologists (CIAT) Affiliate 2023
BIM & Project Collaboration MSc 2024 (pending!)

DB Ltd was founded as an independent external resource for digital solutions, initial office planning, visualisation and Revit Families.

Diane has grown the business with the industry; as advances in technology occur and the demand increases, the business services have pivoted.

DB Ltd is made up of Diane and her dedicated friend and colleague Sarah Sams.

Digital Construction Working Group – December 2023

4

Digital Construction Working Group

Objectives

Whole group objectives –

- Establish best practices and encourage the sharing of knowledge.
- Help appraise membership and support digital tools as they emerge in the sector.
- Support the implementation of digitisation within organisations by influencing and educating key decision-makers and providers.
- Simplify the understanding of emerging tools and interoperability between them.
- Ensure engagement is active within the sector to the wider conversation of digital construction.

Focus Objectives –

- Support compliance with the more onerous Information Management requirements in the revised Building Regulations (the Golden Thread)
- Integration of digital tools and the impact on the Golden Thread.
- Evaluate the application of BIM to drive improvements in the delivery of training and safeguarding health.

Reminder – Members are reminded that they agree to conform to FIS policies, including the Competition Act 1998.

Digital Construction Working Group – December 2023

WHITE PAPER
**INTRODUCTION TO THE GOLDEN THREAD AND
DIGITAL INFORMATION PLANS**

thefis.org

5: Creating your digital inform Foreword

1: Setting the scene

1.3 WHAT IS DIGITAL INFO

Information is simply a structure understood and process. Types:

Design
The information that sets out client and details of design requirements, dimensions & responsibilities like the design responsibility matrix.

Logistics
Information about storage and materials handling, if available, inventory, IT information to enable the required and delivered.

Construction
All the necessary information for programming, complete suggested inspection

Demolition and end of life
Information required end of life or the safe removal of element end of their service

Operational
Information about volume capacity

Cost
Information about purchasing

Inspection
Evidence of compliant installation photos/videos etc.

Does your programme clearly identify safety-critical elements that need to be subject to independent inspection? Remember, notwithstanding any independent inspection undertaken, all construction work, especially any work that will subsequently be closed in, must be:
• Subject to detailed inspection and digital recording
• Signed-off as approved by a responsible individual, who is:
• Competent to do so

Before work commences, have you confirmed that design of any element and the interfaces with other elements is complete and, where relevant, signed off prior to construction of that element?

Do you have a process in place to ensure that prior to commencing work on site, the trade qualifications of all operatives are checked and verified as appropriate for the element of work they undertake?

Do you have a clear change management protocol? The solutions are often incorporated when tolerances vary or unforeseen situations occur. Remember no changes to the design or specification of the works should be permitted without approval from the relevant designers, principal designer and the client. As part of this it is advisable to be clear on what constitutes a major change (see below).

Information
It is vital to identify who is responsible for the information and therefore responsible for getting the data. It is key to establish at the providing what data - this should be clear effectively in contract documents.

Must not affect and must be supported by sustainability and governance (ESG) procedures.

A GOLDEN THREAD, NOT A SILVER BULLET

If the finishes and interiors sector is to meet the challenges of a digital future and building safety regulatory system, then it needs a clear pathway to establish an ecosystem of interoperable platforms in which to share data, all linked to product origin, use and circularity as developed in the delivery of construction projects.

The Building Safety Act 2022 (BSA) demands change and rightly so. In fact, generation, the BSA is set to radically improve information management in construction.

In seeking to reassure Building Control that the integrity of a compliant design is maintained throughout the construction process, the process in which information is produced, captured, checked and shared, is changing.

How information is handed over to the asset owner/tenant to support safe and proper management, beyond the completion of construction and during the entire lifecycle of the asset, is also changing.

For higher risk residential buildings (HRRBs), it is mandated that this must be information management to assist in supporting duty holders for all building work, irrespective of asset type. The Golden Thread is more about a 'cultural' shift supported by a collaborative way of working, and less about the technology that you deploy to achieve the evidence-based outcomes of your 'real' asset management process.

Despite the specific presence of some good examples of structured information management, there has been little standardisation of data management processes, which ultimately leads to data and, from the 'basic' chief to the totem. Faithful labourer: the new Building Safety Regulator has laid down the gauntlet. As an industry we must positively respond, without delay or conviction.

Overwhelmed by the volume of jargon, the critical thing about your digital information plan is that it is accessible, functional, and structured. It doesn't have built around fully parametric 3D modelling, although there is a role and a place for such provision. But ultimate success, starts with doing the basics well. And this is a lesson that those selling software and other 'techy' solutions to the industry need to heed.

"It is vitally important that we bring the visibility of asset performance to light."

FIS
FINISHES & INTERIORS SECTOR

WHITE PAPER
INTRODUCTION TO THE GOLDEN THREAD AND
DIGITAL INFORMATION PLANS

13

Golden Thread of Building Information

FIS

Common Data Environment - A 'single source of truth'

The Right People have the right information at the right time

Right People – those who require the information to carry out a function

Right time – when the receiver needs it, it will add value.

Right Information – the information they need, in a form they can understand and use

Digital | Secure | Proportionate | Transferable | Accessible

14

Right People Internal

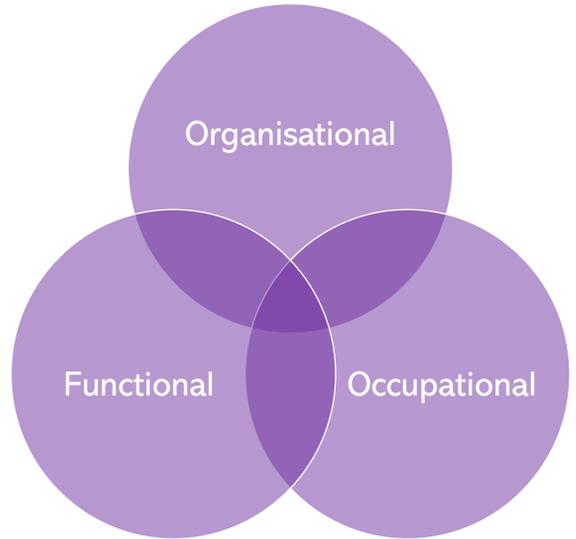

Who is doing what?

- Design Responsibility Matrix
- Responsibility Matrix (RACI)
- Are they competent?

Organisational Capability

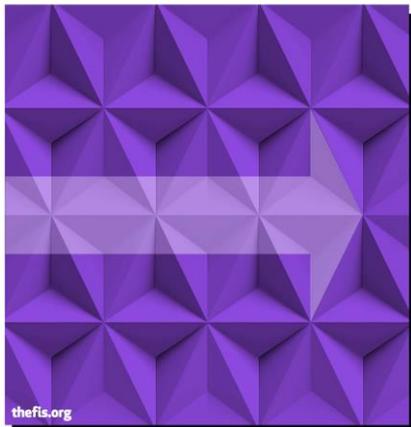

- Quality Management Systems
- Accreditations
- Trade Body Memberships

15

SECTOR GUIDE
COMPETENCY MANAGEMENT PLANS

Track progress of skills development and competencies

Issue training and CPD certificates direct to your workers Competency Passport

Search and manage overall competency of the organisation

Effortlessly connect with competency data of your workforce

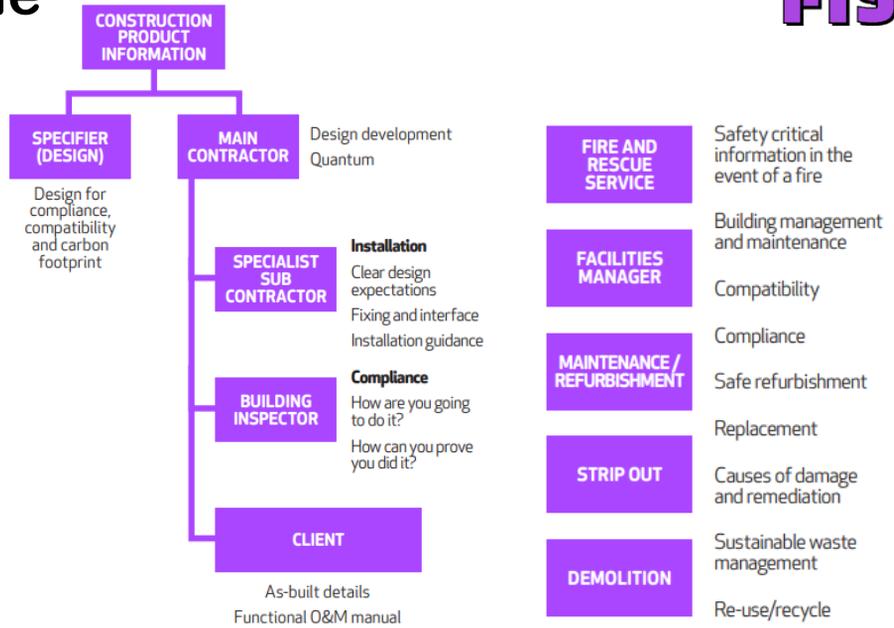

Submit competency record for tenders and H&S management from a single source

Track, view and manage employees CSCS and other industry cards

16

Right People External

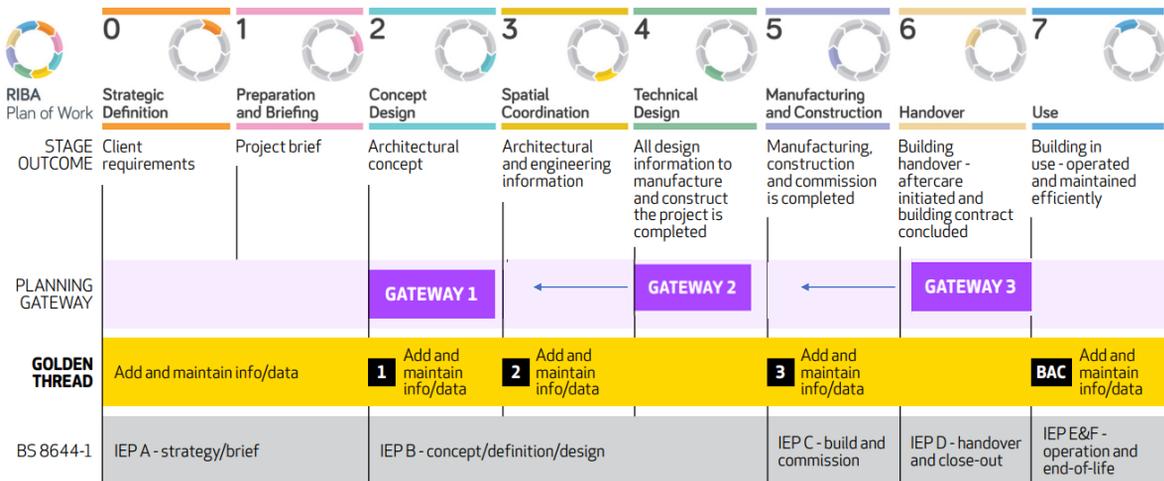

17

Right Time

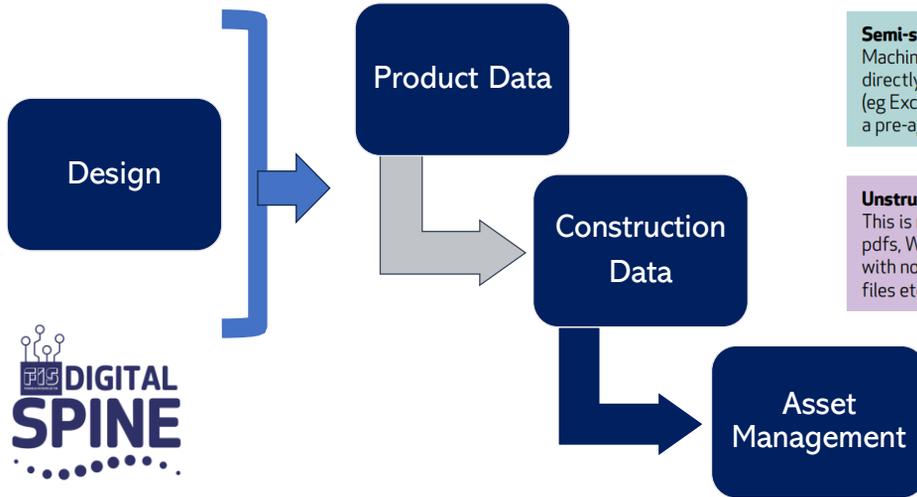

Figure 2: Aligning BS8644-1 to Gateways and Plan of Work (based on information courtesy of Siderise)

18

Types of Information

Structured
Machine readable data organised to a predefined schema that can be automatically read and processed by a computer (and is easy to analyse) - eg JSON, XML, CoBie etc. **5**

Semi-structured
Machine readable data that cannot be directly accessed and will need uploading (eg Excel spreadsheets or CSV arranged in a pre-agreed set of columns).

Unstructured
This is not readily machine readable - eg pdfs, Word documents, Excel spreadsheets with non-standard column structure, media files etc.

19

Right Information

DATA TYPE	GOLDEN THREAD RESPONSIBILITY
<p>Building information: strategic definition and preparation and briefing (RIBA stages 1 + 2)</p> <p>Initially information needs to be captured from the client in the form of employer's information requirements (EIR) for the project.</p>	<p>CLIENT</p> <ul style="list-style-type: none"> Clearly define client requirements. Remember it is a responsibility of the client to allocate resource and timescales to suit the complexity of the project.

20

Right Information

FIS

Design data: concept design and spatial co-ordination (RIBA stage 3)

The next stage is to create design information (ie dimensional requirements, required performance ratings such as fire or acoustic ratings etc).

PRINCIPAL DESIGN TEAM

- A design that allows sufficient space to detail the design (particularly structural and fire safety elements).
- Fire strategy plan and identification of high risk areas.
- The framework for a clear design responsibility matrix.
- The framework for clear information management (ideally specification of process).

21

Right Information

FIS

Design development data: technical design (RIBA stage 4)

Once the design requirements are determined products need to be selected and product data reviewed. This will take the form of general product information (eg type name, component/instance name, description and classification) and manufacturers' information (ie product data sheets containing specific information on scope of use for the selected/installed product and details of any warranties, installation and maintenance information).

DESIGN TEAM

- Clarity on how both active and passive safety systems support compliance with the fire strategy.
- Product information assembled to evidence performance and detail design (attention to interfaces and fixings is critical).
- Evidence checks have been done to ensure that products are available (you can buy it) and that buildability has been considered (can you build it).
- It is advisable that information management standards and key processes to deliver compliance are included in the specification document to support compliant tendering and procurement.
- A completed design responsibility matrix.

22

<p>CONSTRUCTION PRODUCT: INFORMATION CREATION</p> <ol style="list-style-type: none"> 1 Have in place a documented sign-off process for creating 'Product Information'. 2 Have in place a formal version control process for all 'Product Information'. 3 Do not use mis-leading or ambiguous wording, phrasing or imagery and embrace the use of plain English to ensure accurate representation of 'Product Information' and performance claims. <p>www.cpcode.org.uk</p> <p>CONSTRUCTION PRODUCT: ASSOCIATED INFORMATION</p> <ol style="list-style-type: none"> 8 Publish on your website and make easily accessible, clear information on handling, installation, operation, maintenance and disposal of 'Construction Products'. 9 For any guarantees/warranties used in 'Product Information', your website must state what is covered, excluded and required to comply with its terms. The guarantee/warranty should be transparent and in a format recognised by the relevant sector of industry. 	<p>CONSTRUCTION PRODUCT: CORE INFORMATION</p> <ol style="list-style-type: none"> 4 Provide valid and demonstrable documentation where claiming compliance to, or achievement of, any Certification, Classification or Industry Standard. 5 Provide specific documentation when making any product performance claims outside of Certification, Classification or Industry Standard tests; which must be made available on request and shared in an appropriate timeframe. 6 Make available on your website the descriptive and physical characteristics of the 'Construction Product'. 7 Ensure all changes affecting 'Product Information' resulting from changes to the 'Construction Product' are identified and reflecting in revised 'Product Information'. <p>CONSTRUCTION PRODUCT: SUPPORT AND COMPETENCE</p> <ol style="list-style-type: none"> 10 Ensure technical helpline contact details (telephone and/or email) are visible on your website. 11 Have in place a robust training programme (for new and existing personnel) to ensure that anyone conveying 'Product Information' is competent to the level of knowledge required for their role.
--	--

www.cpcode.org.uk

CCPI CODE FOR CONSTRUCTION PRODUCT INFORMATION

FOREWORD

*Manufacturers of Construction Products who choose to sign up to the "Code for Construction Product Information", are agreeing to abide by the clauses in this code to give confidence to those in the supply chain using their **Product Information**, that it is clear, accurate, up-to-date, accessible, and unambiguous. The **Product Information** can therefore be relied upon when making decisions about using those **Construction Products** at any stage of design, specification, installation, use, maintenance and disposal.*

23

Outline information management plan pre-construction

- Have you identified how elements in the construction relate to the key packages and who will be responsible for carrying out inspections and signing off all work that relates to any safety critical elements?
- Is the 'system owner' clear in any design responsibility matrix and has it been discussed in detail with the appointed specialists so that they understand their responsibilities? It is essential to ensure that parties within each tier of the construction team each carry a degree of responsibility for the compliant construction of the completed element.
- Have you confirmed that the contracts accurately reflect above and that any design responsibility has been clearly discussed with the key parties, along with their responsibility for coordinating works?
- Have you set down requirements for any appropriate toolbox talks to be delivered to people just before they start work on or at interfaces with safety-critical elements?

- Has all current information relating to the design, specification and construction of any element of the works been issued in a timely manner to all relevant organisations and individuals involved in the project? This normally comprises specification, drawings, details and manufacturer's instructions. **REMEMBER** Such information must be readily accessible to all operatives involved in the construction of that element (digitally if a higher risk building) or involved in the construction of areas with which it interfaces.
- Do you have a process to ensure all materials arriving on site are examined and recorded as compliant with the project specification, prior to their incorporation into the works? Any concerns that such materials do not comply must also be recorded at that stage and passed on to the lead designer.
- Have you stipulated in advance of construction evidence required to demonstrate effective installation? **This is particularly important in areas that will be closed in.**

- Does your programme clearly identify safety-critical elements that need to be subject to independent inspection? Remember, notwithstanding any independent inspection undertaken, all construction work, especially any work that will subsequently be closed in, must be:
 - Subject to detailed inspection and digital recording
 - Signed-off as approved by a responsible individual, who is
 - Competent to do so.
- Before work commences, have you confirmed that design of any element and the interfaces with other elements is complete and, where relevant, signed off prior to construction of that element?
- Do you have a process in place to ensure that, prior to commencing work on site, the trade qualifications of all operatives are checked and verified as appropriate for the element of work they undertake?
- Do you have a clear change management protocol? Site solutions are often incorporated when tolerances vary, or unforeseen situations occur. Remember no changes to the design or specification of the works should be permitted without approval from the relevant designers, principal designer and the client. As part of this it is advisable to be clear on what constitutes a major change (see below).

- Do you have an inspection plan that identifies the nature and amount of the planned resource? Has this been allowed for in the tender process. Remember the requirements in CDM ie resources allowed must be sufficient to undertake the specified level of supervision and inspection. **20**
- Do you have a competency management plan in place that considers the required level of competence of all involved in installation and how this is verified and recorded? Is this mirrored through the supply chain?
- Does your competency management plan cover supervision and inspection? Will inspection, production of the specified evidence, and sign-off, be undertaken by named and appropriately qualified personnel at each level of the supply chain / construction team? Sign-offs must be subject to monitoring, oversight and review by:
 - Senior personnel within construction companies
 - Other relevant members of the project team appointed with responsibility for seeing that the construction work is compliant
 - Lead designer
 - Main contractor
 - Client.
 Inspections should generally be undertaken during the course of the work and must not be left until the work is finished.

24

Right Information

FIS

Construction data: manufacturing and construction (RIBA stage 5)

As products are installed it is necessary to capture field information eg information collected onsite such as installer, installation date, inspection records (including photographs), any approved changes etc.

CONSTRUCTION TEAM

- Ensure an accurate 'as built' record is available to support quality management, building control approval and maintenance
- A clearly defined change control process to manage unforeseen issues.
- Information on how to manage the building are presented to the principal designer to support the creation of health and safety and building safety pack (the operation and management (O&M) file including fire safety procedures).

25

FIS

Inspection outline for safety critical elements

<ul style="list-style-type: none"> Relevant parts of the specification used for the installation of the element including its performance requirements and drawings marked to show where the element(s) is/are installed. 	<ul style="list-style-type: none"> Manufacturer's instructions, packaging labels collected on site, product standard compliance details, product certificates, etc.
<ul style="list-style-type: none"> Purchase orders, invoices and delivery notes; material inspection reports – for example, made when materials arrive on site. 	<ul style="list-style-type: none"> Records of installer/contractor personnel, including qualifications and experience.
<ul style="list-style-type: none"> Details of benchmark samples or mock-ups prepared, together with approvals that they have been received. 	<ul style="list-style-type: none"> Reports on any initial briefing of the contractor/installer prior to construction of the relevant element.
<ul style="list-style-type: none"> Site works inspection reports - uniquely numbered, dated and if necessary for identification purposes, geolocated, digital images and video logs. These are particularly important for elements that will be covered in (built into the building fabric and hidden from view). 	<ul style="list-style-type: none"> Test results and their written interpretation, reports from independent inspections (including third party installation certification schemes together with details of their accreditation).
<ul style="list-style-type: none"> Details of any future inspection and maintenance requirements for the element. 	<ul style="list-style-type: none"> Sign-offs prepared by a designated individual confirming that, following inspection, the installation of the safety critical element has been found to be compliant.

Change control:

- The name of the individual recording the change
- A description of the proposed change
- An explanation of the reason why the change has been proposed
- Whether the change is a notifiable change or a major change
- A list of the name and occupation of each person, if any, whose advice was sought in relation to the proposed change and a brief summary of any advice provided
- An assessment of which agreed document is affected by the proposed change and confirmation of a revised version
- An explanation, in relation to the proposed change, of how the building work will, after the proposed change is carried out, meet all applicable building regulations
- A revised version of any agreed document affected by the change

26

FIS Drying quality checking process

Item: _____ Installed by: _____ Checked by: _____

This quality check list for drying has been produced by members of the FIS drying working group to help members assess risk during the project and provide a detailed quality check list throughout the installation process.

It has been designed to encompass a wide and detailed range of question which you may choose to consolidate depending on the performance of the drying, the evidence you have been asked or wish to provide and the known experience and competency of the teams.

Project Name:			
Project Number:			
Floor Level:			
Specification:		Wall type:	
Drawing Attached:		YES	
Item:			✓
Design:			
<ul style="list-style-type: none"> Who is the principle designer of the drywall? Is the design and specification complete and complete? Has the specification been produced by the system supplier? Is the fully developed specification and junction drawings available before the start? Has the project gone through a V10 process? If so is this equal and approved by the designer? Has the design provided details for all junctions including the alignment and junction details to ensure performance in accordance with the System owner. 			
Procurement:			
<ul style="list-style-type: none"> Are the owners on a named approved list? Is the buyer fully trained (competent) on the systems they are buying? Has the buyer confirmed that they are aware of all warranty requirements from the system supplier where stipulated (Mix and matching will null and void any performance warranty)? Has the order been checked to ensure the correct materials have been ordered? Have all long lead time items been identified? Are all the materials available to meet the programme dates? 			

V13.1.19 Potential opportunity to include image **Heat***

DESIGN AND TENDER PACK INFORMATION

The following checklist has been compiled to help you check that the key issues have been addressed when specifying drying. It is not exhaustive but a guide to the key issues only.

- Engage with the manufacturer
- Read and understand the fire strategy drawing
- Read and understand the acoustician's requirements for sound insulation, sound absorption and sound diffusion
- Check all layouts and sections against the requirements for the project and of the Building Regulations, building standards and technical books
- Check that the specification will meet the requirements for healthcare and education
- Understand requirements for fire resistance and fire protection
- Read test evidence of compliance for any performance requirements
- Coordinate the requirements for the prepared service openings
- Coordinate the requirements for deflection under live loads
- Coordinate the requirements to address any other building movement, such as interstorey drift
- Address any issues where sound flanking might occur
- Address any issues where air leakage might occur
- Check that the specified system can be installed to the specified/project height and within the fire state maximum height of the system
- Check that any partitioning being installed to the underside of exposed beams and columns will accommodate deflection, address fire insulation and not impact the passive fire protection
- Ensure that the specification meets the sustainability requirements from the client
- Address any requirements where design for security is required
- Coordinate the installation of door openings to ensure that the size weight and slamming force can be accommodated
- Address environmental issues such as humidity, wind loading, bacterial and fungal infection
- Allow for any loads that will be imposed on the drying, such as furniture, sanitary ware and decorative stone surfaces
- Ensure that, where applicable there is a declaration of performance, and the products are UKCA or UKNI marked
- Ensure that the requirement to install a benchmark sample area is included in the specification
- Ensure that tolerances are clearly stated using BS 8000-8 or BS 8212
- Ensure that, where required, fire-resistant partitions take precedence over any other performance requirements (especially at corners and junctions)

GOLDEN RULE 1 Ensure early engagement with the manufacturer, manufacturer and specialist installers.	GOLDEN RULE 2 Review the fire strategy documents and the strategy for the project with the manufacturer and specialist installers.	GOLDEN RULE 3 Identify all the specific issues arising through the design process and building any building products. Identify any areas where it is not clear how to proceed and resolve the issues.
GOLDEN RULE 4 Follow the Design process for project start.	GOLDEN RULE 5 Only select Packaging products from their early suppliers. Check the early suppliers' products are certified to CE marked and meet using the relevant standards.	GOLDEN RULE 6 Clearly define the Packaging products to be used. Check the products are certified to CE marked and meet using the relevant standards.
GOLDEN RULE 7 Require copies of the full part specification from the manufacturer. These should include a liability certificate to ensure the specification and full requirements are met for the situation.	GOLDEN RULE 8 Ensure the location of all penetrations and interfaces are clearly defined in the specification and full requirements are met for the situation.	GOLDEN RULE 9 Ensure a standardised approach to the specification and full requirements are met for the situation.

System based thinking

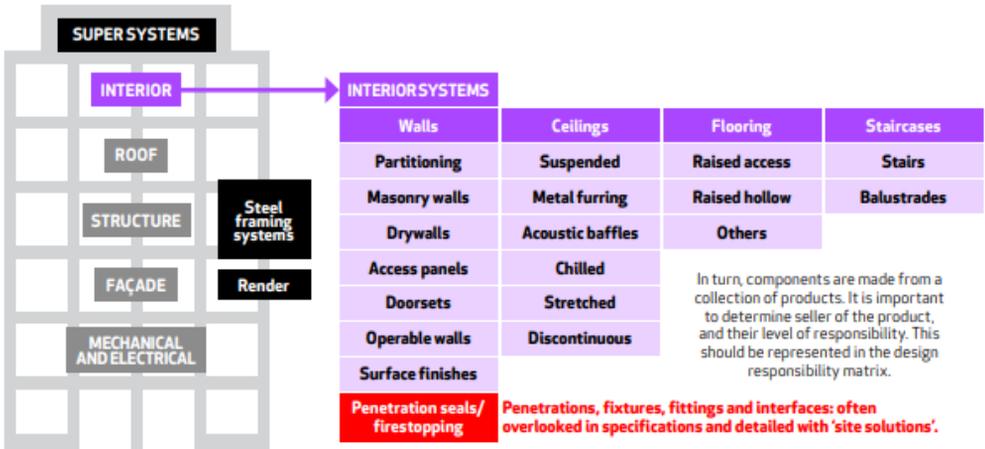

Figure 3: Building systems, an introduction to interior super systems

36

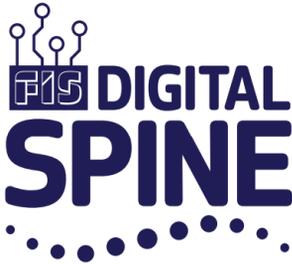

Digital Construction Working Group

Discussion

Key Trends –

Digitalisation and challenges in the finishes and interiors sector. How digitalisation is supporting Compliance, Productivity, Opportunity and Priorities. Opportunities and Challenges.

- Does anybody feel like they have the Golden Thread covered?
- What (if anything) is being specified in terms of digital tools or standards?
- Where are the obstacles/barriers to integrating technology?
- Where are the critical disjoints? Is there key areas where a more standardised approach could be useful? Do we need to define Critical Information Exchange Points? Is that possible on a sector level?
- What good stuff is out there that we should be heralding?
- What skills are we lacking? Where do businesses need help?
- What help do people need?
